

## Power Monitoring Unit (PMU)

### ◆DESCRIPTION:

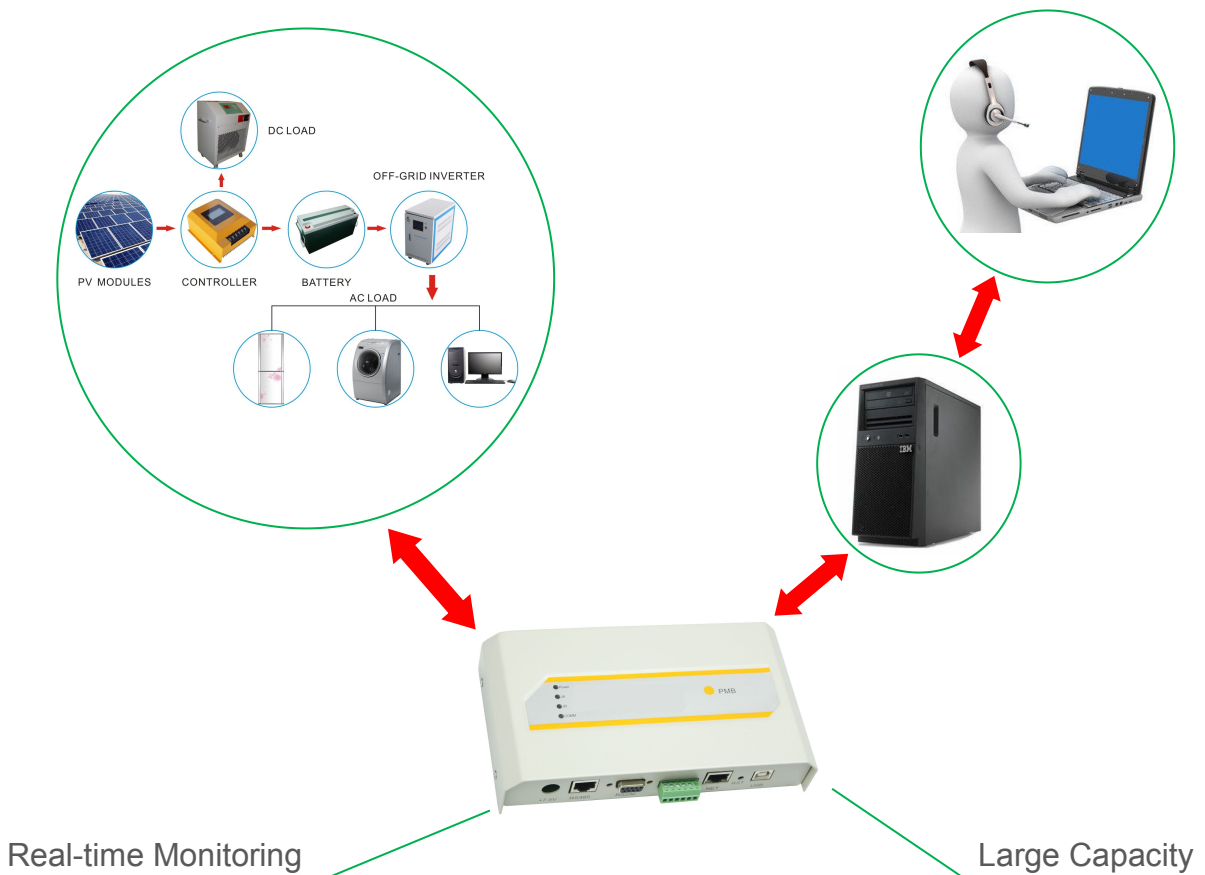

PMU (Power Monitoring Unit) is a PV system monitoring device developed by GLE (Green Light Energy). It is a highly reliable data log device for off-grid solar system, by connecting to the internet it will transfer real-time running data to our central server. The authorized person is able to access the server and review real-time data and status. Within PMU solution, our technical specialists could remote diagnose the solar system if any problem, it will highly improve system service quality.

### ◆FEATURES:

- Good Compatibility:** it can be installed in any new or existed off-grid solar system.
- Strong Support:** We have a specialist team behind to analyze and solve any kind of system problem.

- Easy to Install:** Only a few work for information setting by computer.

- After Sales Benefit:** by monitoring the system running data, we are able to find potential problems. Most of problems will be solved before arising.
